Retail Qualifications - Handheld Cellular Device

Plug'n Pay is ready to handle your handheld cellular accounts and get you retail qualification using **Vital, Global East, First Data Omaha and Nashville.**

You handle the merchant account - just get it set-up for retail -this is a true retail transaction.

The **Mobile Verifier** software we have integrated does card swipe, signature capture and even has a thermal printer!!

Any of the below devices are compatible with Plug'n Pay's **Mobile Verifier**:

Sprint Treo 300
Sprint Samsung I300 (these are down to \$199)
Sprint Samsung I330
Sprint / Verizon Kyocera 6035
Verizon Kyocera 7135
T-Mobile Treo 270
Cingular Treo 270

To learn more and get information on the sign-up process go to:

https://pay1.plugnpay.com/reseller_docs

Plug'n Pay can also do retail over the Internet if the customer has a PC based application - they will need to have their software provider write to our API (it contains full information on how to pass the card swipe data to us).

This has already been accomplished multiple times - and if the developer is capable, it can be done without too much time and effort.
